

Would you let a former staffer keep a key to your office?

***Certainly not.***

So

Why keep their  
logins active?

That's a **major** risk.

And it  
happens  
more  
**than you realize.**

Many organizations forget to revoke:

- Email accounts
- Shared file access
- Vendor tools
- Admin permissions

They can  
linger

for  
years.

***Quiet.***  
***Overlooked.***

Until someone  
discovers them...  
and exploits them.

**It's not always malicious.**

Yet even a former  
colleague can create

**havoc.**

So how do you uncover  
**lingering accounts?**

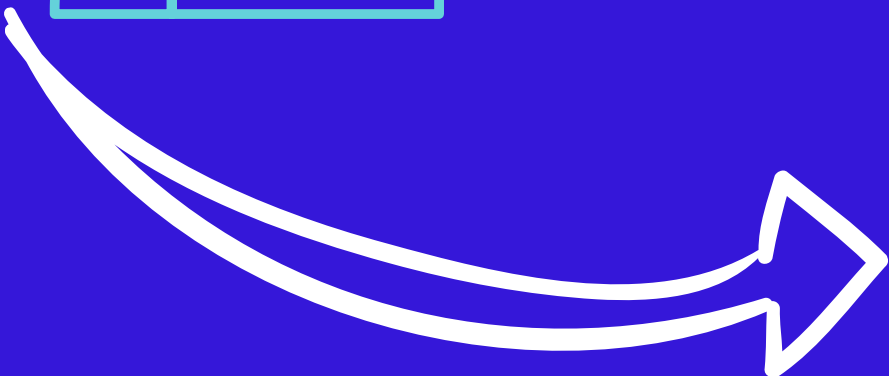

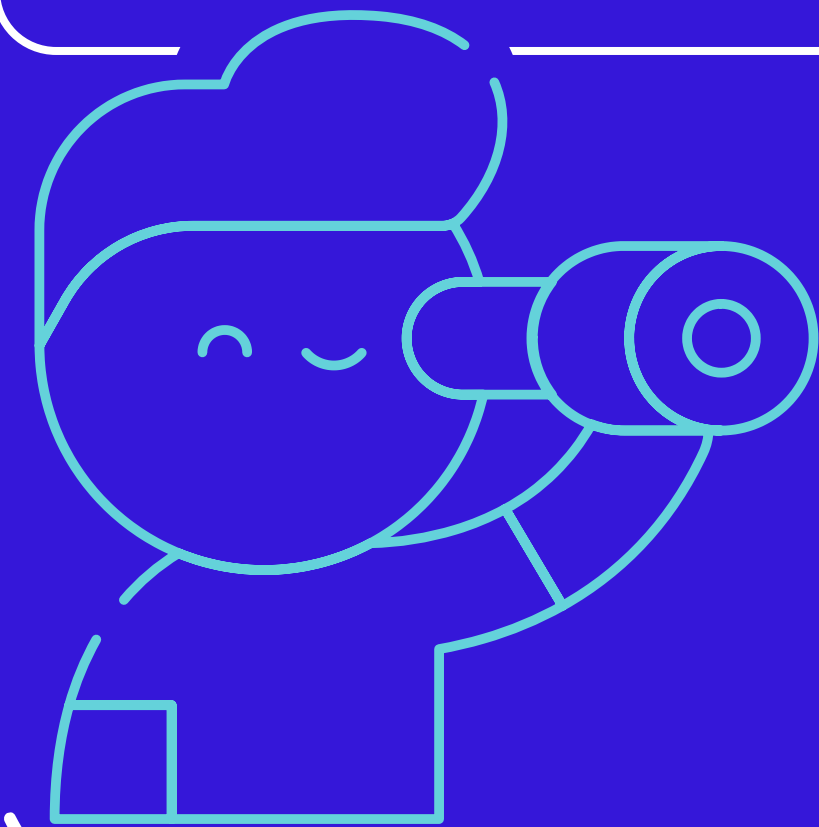

Begin with a user audit.

**(We can guide you  
through it swiftly.)**

**Look for:**

- Dormant users
- Duplicate accounts
- Shared logins
- Apps no longer in operation

Then close them down properly:

- Disable logins
- Remove access rights
- Transfer ownership of files

# Never

**trust your memory or  
spreadsheets alone.**

**Establish a comprehensive departure  
checklist:**

- Every role.
- Every platform.
- Every occasion.***

Let's secure your  
environment  
**the intelligent way.**

Our team will identify  
the gaps  
**and shut every door  
tight.**

**Get in touch.**
