

Establish a trusted data foundation

Is your data ready for analytics and AI?

Fostering innovation in AI requires a well-orchestrated data estate. But for many businesses, it can be hard to extract value from data—much less do it securely. Enter Microsoft Fabric, an AI-powered analytics platform that unites all of your data and analytics needs while also helping to protect it.

It all starts with OneLake

At the heart of Fabric lies OneLake. Think of it like the OneDrive for your data. It's a single, unified logical data lake for your entire business—and it can help you create more efficient processes and reduce costs associated with moving, duplicating, or storing data.

One location for all your data

Centralize data discovery, sharing, governance and compliance.

One copy of data

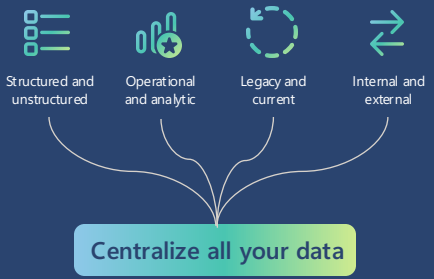

Securely share data between users and applications without having to move or duplicate it.

One trusted data hub

Access a searchable hub where you can discover, manage, and reuse data in a single location.

Simplifying data optimizes everything

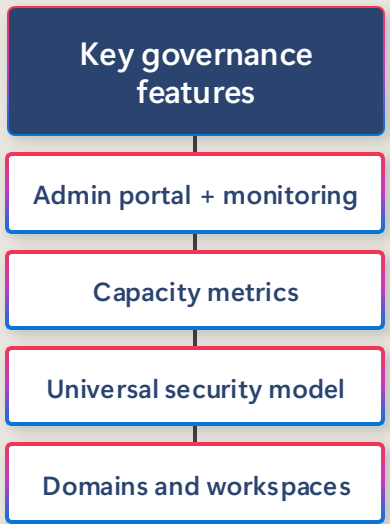

OneLake operates by using open, updatable formats that are standardized across all analytic engines. Then, shortcuts connect that data across OneLake and all your data sources. You don't have to move or duplicate information—and that makes it easier and more cost-effective to get instant access to business insight.

Security is built into Microsoft Fabric

With Microsoft Fabric, security is always on, always evolving, and embedded at every layer. That means you can rest easy knowing that your data is protected no matter where it's coming from or where it goes.

- Built on the trusted Azure foundation
- Out-of-the-box security, compliance and governance
- Designed to protect sensitive assets

Improve the health of your data

Microsoft Fabric also comes with its own set of governance tools, like data lineage, information protection labels, and much more. Your data is healthier and of higher quality—and that's essential for both preparing for deeper insight and to start developing custom AI and ML solutions.

Let us help you build your trusted data foundation

We are a Microsoft partner committed to helping small and medium-sized businesses like yours create rich data analytics and AI solutions. Are you ready to get started?
