

Windows 10 is
nearing its end...

**And the
countdown to
October 14
is on.**

After that

there will be:

- ✘ No updates
- ✘ No security patches
- ✘ No free support

“

But can't I just keep using it?

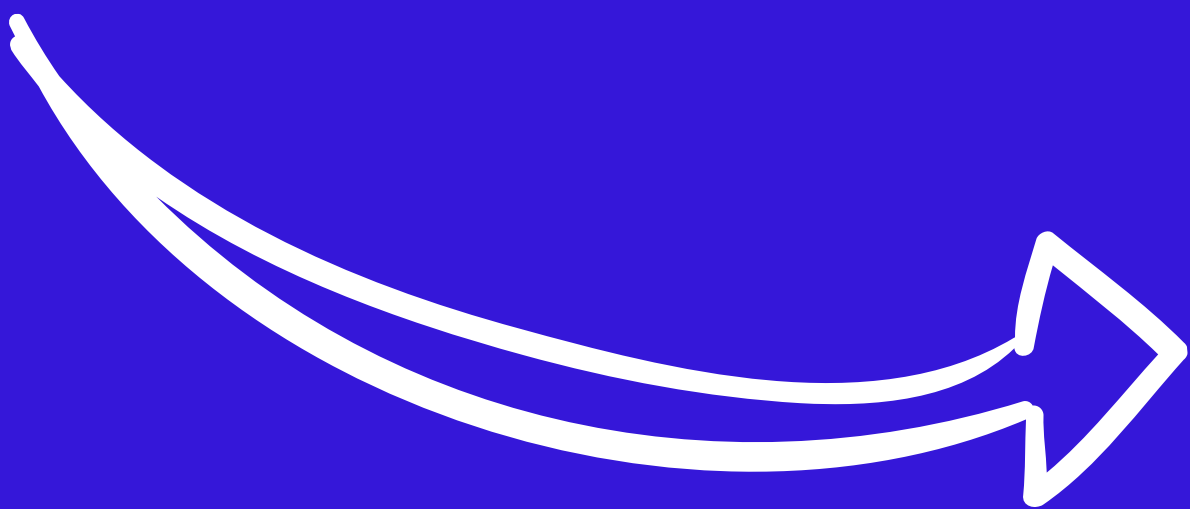

”

Sure.

You can also:

- **Drive a car** with no seatbelts
- **Use a phone** from 2005
- **Ignore an oil change** until your engine dies

...But why would you?

Cyber criminals love
outdated software.

It makes your business a

**sitting
duck.**

Crashes & downtime

= lost productivity

No support

= IT headaches

Security breaches

**= possible fines &
reputation damage**

Here's why

upgrading to Windows 11
is a good move:

- ✓ **Built-in security improvements**
- ✓ **Faster performance & better multitasking**
- ✓ **AI-powered features for smarter workflows**

But

before you make
the switch...

Check if your devices support Windows 11

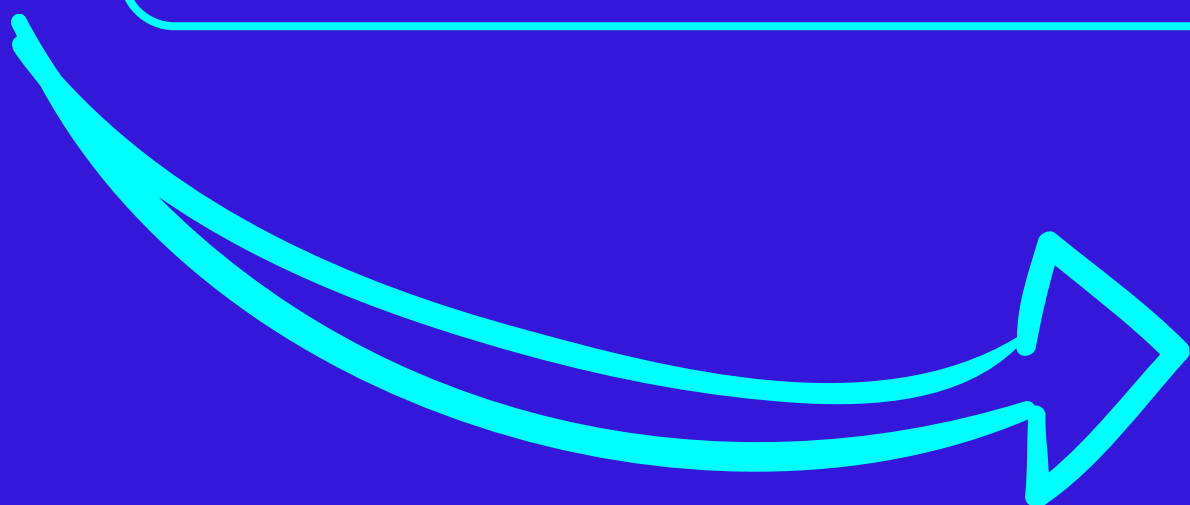

Upgrade or replace old hardware

Be ready to train your team on the new system

Work with IT for a smooth transition

The deadline is closer than you think.

*Start planning **now.***
